The Vertices of $\triangle ABC$ are

$$\mathbf{A} = \begin{pmatrix} 0 \\ c \end{pmatrix} = \begin{pmatrix} 0 \\ 18.7 \end{pmatrix} \quad (2.0.13)$$

$$\mathbf{B} = \begin{pmatrix} 0 \\ 0 \end{pmatrix} \quad (2.0.14)$$

$$\mathbf{C} = \begin{pmatrix} a \\ 0 \end{pmatrix} = \begin{pmatrix} 26.5 \\ 0 \end{pmatrix} \quad (2.0.15)$$

1 QUESTION No. 2.3

Draw $\triangle ABC$ in which $\angle B = 45^\circ, \angle C = 45^\circ$ and $a + b + c = 11$

2 EXPLANATION

Given,

$$\angle C = 45^\circ, \angle B = 45^\circ, \text{ and } a + b + c = 11 \quad (2.0.1)$$

By using Sin Rule:

$$\frac{\sin A}{a} = \frac{\sin B}{b} = \frac{\sin C}{c} \quad (2.0.2)$$

$$\implies b \sin C = c \sin B \quad (2.0.3)$$

$$b \sin 45 = c \sin 45 \quad (2.0.4)$$

$$\implies b = c \quad (2.0.5)$$

$$a \sin B = b \sin A \quad (2.0.6)$$

$$a \sin 45 = b \sin 90 \quad (2.0.7)$$

$$\implies a = \sqrt{2}b \quad (2.0.8)$$

Then, $\mathbf{AX}=\mathbf{B}$

which can be expressed as the matrix equation

$$\begin{pmatrix} 0 & 1 & -1 \\ 1 & -\sqrt{2} & 0 \\ 1 & 1 & 1 \end{pmatrix} \begin{pmatrix} a \\ b \\ c \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \\ 11 \end{pmatrix} \quad (2.0.9)$$

(2.0.9) by solving, we get values like,

$$\implies a = 26.546; \quad (2.0.10)$$

$$\implies b = 18.77; \quad (2.0.11)$$

$$\implies c = 18.77 \quad (2.0.12)$$

Plot the $\triangle ABC$ is as follows:

Fig. 0: $\triangle ABC$
